

The sample format should be like this for all the questions in Assignment-6.pdf:

- a) Attach the screenshot for the creation and insertion of values in the table.
- b) Attach the screenshot consisting of the query and its output.

### Q1 solution :

- a) Creating Tables (Table name: **student**)

```
mysql> create table student_rollnum(RollNumber integer,Studentname char(30));
Query OK, 0 rows affected (0.02 sec)

mysql> describe student_rollnum;
+-----+-----+-----+-----+-----+-----+
| Field      | Type      | Null | Key | Default | Extra |
+-----+-----+-----+-----+-----+-----+
| RollNumber | int       | YES  |     | NULL    |       |
| Studentname | char(30)  | YES  |     | NULL    |       |
+-----+-----+-----+-----+-----+-----+
2 rows in set (0.00 sec)
```

### Inserting Values

```
mysql> insert into student_rollnum values('1','RAJ');
Query OK, 1 row affected (0.00 sec)
```

- b)
    - i) Attach the screenshot consisting of the query and its output.
- For example:

```
mysql> select * from student_rollnum;
+-----+-----+
| RollNumber | Studentname |
+-----+-----+
|          1 | RAJ         |
+-----+-----+
1 row in set (0.00 sec)
```

- ii) So on.

**Note: Every table you are creating should be with your roll number.**

**Ex: student\_cs23bt001**
